OVERALL RISK SCORE — HIGH RISK

92.8 / 100

0 = least risky · 100 = most risky

Metric Breakdown

METRIC	VALUE	RISK SCORE
Current Ratio	0.55	100
Debt To Equity	negative equity (insolvent)	100
Interest Coverage	2.61	83.0
Operating Margin	-6.93%	100
Revenue Growth	3.07%	79.6

Plain-English Summary

Vodafone Idea Limited has an overall financial risk score of 92.8 out of 100, indicating extremely high risk.

Three critical metrics drive this high score upward: * **Debt to Equity (risk 100/100):** The company has "negative equity," meaning its total debts outweigh its assets, making it insolvent (owing more than it owns). * **Current Ratio of 0.55 (risk 100/100):** This measures the ability to pay short-term bills. A score below 1 means they lack the cash or quick assets to cover immediate payments. * **Operating Margin of -6.93% (risk 100/100):** This is the profit earned from daily operations; a negative percentage means the core business is losing money.

Additionally, slow sales growth (Revenue Growth of 3.07%, risk 80/100) and a weak ability to pay loan interest (Interest Coverage of 2.61, risk 83/100) further push risk up.

Overall, the company is in severe financial danger because it is losing money on its daily business, cannot cover its immediate bills, and owes more than it actually owns.

This report is generated automatically from publicly available financial data (via yfinance) and a transparent, code-computed risk model. Figures may be incomplete or delayed. The risk model is built for non-financial companies and is less reliable for banks, NBFCs, and insurers. This is not investment advice.
