OVERALL RISK SCORE — LOW RISK

6.9 / 100

0 = least risky · 100 = most risky

Metric Breakdown

METRIC	VALUE	RISK SCORE
Current Ratio	2.23	0
Debt To Equity	0.11	0
Interest Coverage	54.37	0
Operating Margin	25.10%	0
Revenue Growth	4.58%	69.5

Plain-English Summary

Tata Consultancy Services has an exceptionally low overall risk score of 6.9 out of 100.

The primary factor pushing risk up is **Revenue Growth** of 4.58% (risk sub-score 69/100), showing relatively slow sales expansion. However, two key drivers push risk down significantly: 1. **Debt to Equity** is a very low 0.11 (risk 0/100), meaning the company owes almost nothing compared to what it owns. 2. **Operating Margin** is strong at 25.10% (risk 0/100), which is the percentage of sales kept as profit after paying daily running costs.

Furthermore, its **Current Ratio** of 2.23 (risk 0/100) means it has more than double the short-term assets needed to pay near-term bills. Its **Interest Coverage** of 54.37 (risk 0/100) shows it earns over 54 times the amount needed to pay interest on its debts.

Overall, the company is in an incredibly secure financial position with minimal debt and high profitability, despite its slow sales growth.

This report is generated automatically from publicly available financial data (via yfinance) and a transparent, code-computed risk model. Figures may be incomplete or delayed. The risk model is built for non-financial companies and is less reliable for banks, NBFCs, and insurers. This is not investment advice.
